

Introduction and Description of Proposal

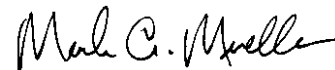

This engineering exhibit was prepared in support of a minor change application being filed by Tom Hodgins for authority to move K283BU (FCC Facility ID 156912) to Spokane, Washington, change channel to 231D, and change the ERP, HAAT and primary station under the provisions of the Class C/D filing window in the “Revitalization of the AM Radio Service”, MM docket 13-245.

Filing Window Eligibility

The primary station, KSBN, Spokane, Washington, (FCC Facility ID 64668) is a class-C AM station eligible for the January 29, 2016 window. The proposed transmitter site is an existing tower (ASRN 1216657) 112.4 miles from the authorized K283BU site, well within the 250 mile limit. The proposed 60 dBu contour is contained completely within a 25 mile radius of KSBN, and within the KSBN licensed 2 mV/m daytime service contour as shown on attached Exhibit 10.

This engineering exhibit was prepared by me and is true and correct to the best of my knowledge and belief.

July 27, 2016
