

TECHNICAL EXHIBIT
MINOR CHANGE IN LICENSED FACILITY
STATION WBEK-CA (FACILITY ID 3369)
AUGUSTA, GEORGIA
CH 16(z) 150 KW (MAX-DA)

Technical Narrative

The technical exhibit of which this narrative is part was prepared in support of a minor change application for Class A television station WBEK-CA at Augusta, Georgia (BLTTL-20001215AAV).

Proposed Facilities

This application proposes to increase the directional antenna ERP and rotate the existing antenna to 100° True. The transmitter site will remain at 33-28-25 N, 82-02-05 W (NAD 27). The proposed maximum visual ERP is 150 kW and the antenna RCAMSL remains 180.7 meters. There will be no change in transmitter site, antenna, channel or community of license. The FCC antenna structure registration number is 1212621.

NTSC Allocation Considerations

A study has been conducted using the provisions of Sections 73.6011, 73.6012 and 73.6014 to assure that the proposal will not create prohibited interference with other authorized or pending NTSC full-power, Class A or LPTV stations. The proposal is involved in contour overlap with full-service NTSC stations WJWJ-TV (Ch. 16, Beaufort, SC) and

WGGS-TV (Ch. 16, Greenville, SC). However, the attached OET-69 interference study (Figures 1 & 2) indicates that no *prohibitive* interference will be caused to either station.

DTV Allocation Considerations

Pertinent DTV allotments and assignments on channels 15, 16 and 17 have been examined using the procedures outlined in the FCC's OET-69 bulletin.¹ The proposal in only involved in contour overlap with one station, namely, WGXA-DT (Ch. 16, Macon, GA). The OET-69 interference caused study to station WGXA-DT is also included in Figure 1.

If necessary, a waiver of the FCC rules is respectfully requested based on lack of prohibitive interference caused to stations WJWJ-TV, WGGS-TV and WGXA-DT using the procedures outlined in the FCC's OET-69 Bulletin.

Radiofrequency Electromagnetic Field Exposure

The proposed WBEK-CA facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. A maximum visual ERP of 150 kW with 10% aural power was assumed. A relative field value of 0.24 (at a downward angle of 73°) was assumed for the Antenna Concepts 8-bay downward radiation (see Figure 3). The calculated power density at a point 2 meters (6.6 feet) above ground level and at the “worst case” angle of 73° below horizontal is 0.1083 mW/cm². This is 34% of the FCC's recommended limit of 0.32 mW/cm² for channel 16 for an “uncontrolled” environment. This is believed to be in compliance (less than 100%) with the FCC standards as there are no other known broadcast operations in the vicinity.

¹ The duTreil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 1 km was employed. An Alpha based processor computer system was employed. The results have been found to be in very close agreement with the results of the FCC implementation of OET Bulletin No. 69.

du Treil, Lundin & Rackley, Inc.

Consulting Engineers

Page 3

Augusta, Georgia

Access to the transmitting site will be restricted and appropriately marked with warning signs. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down. The proposed WBEK-CA operation appears to be otherwise categorically excluded from environmental processing.

In addition, it appears that the existing structure is otherwise excluded from environmental processing as it complies with all the criteria for such an exclusion in Section 1.1306.
