

Exhibit for Minor Change in
Licensed Facility BLFT-20070524AET

K249DV, Baker, LA, Facility ID - 141228 Educational Media Foundation.

This facility proposes to lower the ERP on its licensed translator which is residing on an existing tower that is located nearby to WXOK-AM 1460 kHz, Baton Rouge, LA. Specifically, K249DV's current location is 2.67 kilometers from the WXOK-AM array.

This exhibit addresses the possibility that should the FCC grant the facility contemplated herein, that a Special Operating Condition will be attached to the construction permit, which would deal with the potential adverse affects to the array of AM station WXOK. Typically, these conditions would require a partial proof of performance on WXOK-AM be conducted both before and after construction of the facilities authorized by the construction permit. We believe that this condition would be unnecessary, as the antenna for the translator is mounted on an existing tower, and is therefore unlikely to have any significant affect on the AM station's array.

More recent construction permits for FM translators have updated AM proximity conditions such as the following:

If the antenna is mounted on an existing tower that is not base-insulated or detuned at the AM frequency, the permittee shall submit a certification to this effect.

We certify that the antenna for K240DV is proposed to be mounted on a pre-existing grounded steel tower, and respectfully request that no condition for a partial proof be placed on the construction permit.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Michelle A. Hosier", with a stylized flourish at the end.
