

Addendum to Exhibit A (Compliance with CFR 74.1204)

The proposed FM Translator is located within the protected 60 dBu contour of second adjacent channel station WZUS.C, channel 265A, Macon, IL. The predicted F(50-50) field strength of WZUS.C at the proposed translator site is 87.8 dBu. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is 127.8 dBu. This interfering contour extends less than 1 meter from the proposed transmit antenna, and the area of overlap does not reach the ground.

Therefore, LCRM respectfully requests a waiver of C.F.R. 74.1204 based on no population within the area of predicted interference.
