Second-Adjacent Waiver Request
Kansas City, KS

The proposed LPFM station will broadcast on channel 249, which is within the 73 kilometers second-adjacent minimum distance separation of station KLRX on channel 247; and the 84 kilometers second-adjacent minimum distance separation of station KMBZ-FM on channel 251. The KLRX interfering contour at the LPFM tower site is 93.9 dB μ F(50,50). The KMBZ-FM interfering contour at the LPFM tower site is 96.2 dB μ F(50,50). Using the ratio of 100:1 (LPFM to KLRX and KMBZ-FM) on the second-adjacent channel, the population within the proposed LPFM 133.9 dB μ contour and 136.2 dB μ contour is zero. Using the free space equation, the predicted interference area is expected to extend 14 meters from the antenna. The antenna is 30 meters above ground level, thus the interference area will never reach the ground. There are no occupied structures or elevated roadways within the interference within the interference area of the LPFM. Therefore, the application is in compliance with §73.807(e)(1) *Waiver of the second-adjacent channel separations*.
