

## EXHIBIT 12

This narrative exhibit is submitted to demonstrate that this proposal fully complies with the interference criteria set forth in Section 74.1204 of the Commission's rules. Attached at exhibit 13 are a spacing study, an additional narrative exhibit, and maps demonstrating clearly that there is no prohibited overlap between this proposal and any other FM services. The attached FM spacing study demonstrates that this proposal would be fully spaced even as a full power Class A FM station to all but three other FM facilities. The attached maps demonstrate that there is no prohibited contour overlap between these three facilities and the instant proposed FM translator facilities. One proposed FM translator and one full power FM station have also been included on the maps because of their proximity to the proposed facilities. As demonstrated in these maps no prohibited overlap with these stations is predicted.

The five facilities that have been included on the attached maps are: WBYN-FM, 107.5, Boyertown, PA (54 dBu contour to proposed 94 dBu interference contour); WWIQ, 106.9, Camden, NJ (54 dBu contour to prop. 48 dBu int. contour); WWYY, 107.1, Belvidere, NJ (60 dBu contour to prop. 40 dBu int. contour); WZCY, 106.7, Hershey, PA (54 dBu contour to proposed 94 dBu interference contour), 20030317EXF, 106.5, Reading, PA (60 dBu contour to prop. 100 dBu int. contour); and 20030317EXF, 106.5, Reading, PA (100 dBu interference contour to prop. 60 dBu contour). The final attachments to this exhibit are a 74.1204(d) study with regard to overlap between this proposal and the coverage contour of WBYN-FM, Boyertown, PA. A scale of kilometers has been included on the maps. These maps were drawn to scale using the rfSoftware series of computer programs.
