

Exhibit 14 - Statement B
DAYTIME COVERAGE AND ALLOCATION CONSIDERATIONS
prepared for
WNVR Vernon Hills, Illinois
Facility Id 52910
1030 kHz 10 kW DA-2 U

Polnet Communications, Ltd. (“*Polnet*”) licensee of Standard Broadcast Radio Station WNVR, 1030 kHz, Vernon Hills, Illinois proposes to increase its operating power to 10 kW utilizing the same directional antenna pattern, but at the new, higher power level. The proposed coverage contours are shown in **Exhibit 14-Figures 3 and 3A**. These contours utilize ground conductivities obtained from the most recent WNVR proof of performance and from measurements included herein. Where measured conductivities are not available, FCC Figure M3 ground conductivity was used. Distances to contours and associated ground conductivity data for the proposed WNVR facility are summarized in **Exhibit 14-Table I**.

The locations of the protected and interfering contours of pertinent nearby domestic stations operating on the same channel, and within three channels above and below the proposed frequency of use, were predicted using the same methodology and M-3 conductivity data and measured conductivity data where available. The locations of the contours for each of these stations are shown on **Exhibit 14-Figures 4, 5, 6, and 7**. As shown, there is no prohibited contour overlap over land areas. The radiation and conductivity assumptions, along with the resulting distances to the identified contours, are tabulated in **Exhibit 14-Table II, Sheets A-D** for stations which measured conductivities were used. Tabulations of contour distances and conductivity assumptions using only Figure M-3 conductivity data can be provided upon request of Commission Staff. Where appropriate, notations are included in the data tabulations as to facility status or operational considerations.

Consideration of Auction 84 Applications

In this allocations study there are several facilities that have pending applications which were originally filed in the Auction 84 filing window¹. The following will serve as an explanation of the treatment of these applications for the purpose of this application.

¹ See *Public Notice “AM New Station and Major Modification Auction Filing Window; Minor Modification Application Freeze; Notice and Filing Requirements Regarding January 26 – 30, 2004 Window for Certain AM Construction Permits Applications; Notice Regarding Freeze on the Acceptance of AM Minor Change Construction Permit Applications from January 12 to January 30, 2004,”* 18 FCC Rcd 23016.

Exhibit 14 - Statement B
DAYTIME COVERAGE AND ALLOCATION CONSIDERATIONS
(page 2 of 3)

Applications were filed in the 2004 window for both WCGO, Jenison, Michigan (Facility Id 39386) and KTGG, Grandville, Michigan (Facility Id 61993). These were subsequently designated as the only applications in MX Group 84-162². During the settlement period, a long form application for WCGO was filed (File Number BMJP-20051007ACM) along with a settlement agreement. The Commission's CDBS database also notes a settlement agreement has been filed for KTGG. Only the facility specified in the WCGO long form application (as recently amended) is considered herein as the sole surviving application of these two.

There are three co-channel stations for which applications were originally tendered in the Auction 84. They are WLHN, Princeton, Indiana (Facility Id 1724); a new application for Jeffersonville, Indiana (Facility Id 161534); and WGYV, Aurora, Indiana (Facility Id 7902). These three stations along with twelve other applications were designated as MX Group 84-160³. As shown in **Exhibit 14 - Figure 4** the proposed WNVR 10 kW facility would fully protect the daytime facilities proposed for WLHN and the new Jeffersonville, Indiana proposal.

With respect to the WGYV proposal, according to the Commission's CDBS database, the applicant for WGYV filed a long form application (File Number BMJP-20051031AGM) along with a settlement agreement and a 307(b) showing. For the purpose of the instant application, it is assumed that the WGYV "Tech Box" filing (depicted as dashed contours in **Exhibit 14 – Figure 4**) has been superceded by the WGYV 2005 long form facility. As shown in **Exhibit 14 – Figure 4**, the proposed upgrade of WNVR fully protects the surviving WGYV facility proposed in the 2005 application and settlement agreement.

² See Attachment 84-MX to *Public Notice*, "AM Auction No. 84 Mutually Exclusive Applicants Subject to Auction – Settlement Period Announced for Certain Mutually Exclusive Application Groups – September 16, 2005, Deadline Established for Section 307(b) Submissions," 20 FCC Rcd 10563.

DAYTIME COVERAGE AND ALLOCATION CONSIDERATIONS
(page 3 of 3)

Measurements on 63° Radial

Measurements were taken on the 63° radial in order to fill in the arc of measured conductivities toward second adjacent station WLIP, Kenosha, Wisconsin. The results of those measurements are shown in **Exhibit 14 – Table III** and **Exhibit 14 – Figure 8**.

Conclusion

Based upon these tables and figures, it is believed that this proposal is compliant with the appropriate allocation requirements of the Commission's Rules and policies. Further, the proposed increase in the WNVR coverage area, while not creating any additional interference over land to any operating station, is clearly in the public interest.
