

TECHNICAL STATEMENT
RADIO MULTIPLE OWNERSHIP ANALYSIS
CLEAR CHANNEL BROADCASTING LICENSES, INC.

This statement and the attached figures were prepared on behalf of Clear Channel Broadcasting Licenses, Inc. ("CCBL"), a licensee subsidiary of Clear Channel Communications, Inc. ("CCC"). CCBL proposes to acquire the facilities specified in construction permit BPH-19970723MR. A multiple ownership analysis was prepared considering the following radio stations under present or proposed common ownership or time brokerage:

Table 1: Proposed Commonly Owned or Controller Stations Studied

Call Sign	City	State	Freq	Status
BPH-19970723MR	Ashtabula	OH	98.3	CP
WFXJ-FM	North Kingsville	OH	107.5	LIC
WREO-FM	Ashtabula	OH	97.1	Lic
WZOO-FM	Edgewood	OH	102.5	LIC
WFUN(AM)	Ashtabula	OH	970	Lic

Since certain of these stations have overlapping principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations), an ownership study has been prepared in accordance with the Federal Communications Commission's multiple ownership rules¹.

CCC does not have an attributable interest in any other station with a principal community contour that overlaps or intersects the principal community contour of BPH-19970723MR.

Radio Markets

The "radio market" applicable to common ownership of the subject stations is defined as the area encompassed by the mutually overlapping principal community contours of the proposed commonly owned stations. These mutually overlapping contours form one "radio market" for analysis under the Commission's rules.

Radio Market is defined by the mutually overlapping principal community contours of BPH-19970723MR, WFXJ-FM, WREO-FM, WFUN(AM), and WZOO-FM. The predicted principal community contours of these stations (4 FM, 1 AM) are shown in *Figure 1*.

¹ See 47 C.F.R. § 73.3555.

Count of Stations in Defined Markets

The number of radio stations in a "radio market" is determined by counting the operating, commercial stations having principal community contours which overlap or intersect the principal community contours which define the radio market, plus the subject commonly owned or controlled stations.

In the "radio market" studied herein, there are at least 15 radio stations, including the subject co-owned stations that overlap or intersect with the defined "radio market." *Figure 2* is the tabulation of some of the radio stations identified in the "radio market".

Only known licensed, operating commercial stations were included in this tabulation. Distances to contours for AM stations were predicted using the antenna patterns as identified in the Commission's AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 C.F.R. § 73.184. Ground conductivities were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method of 47 C.F.R. § 73.313. Terrain data was derived from the N.G.D.C. 30 second computer database for each of the FM stations using radials spaced every 10 degrees of azimuth.

Based on the above, it is concluded that the proposed modifications comply with § 73.3555(a) of the FCC Rules.

Sincerely,

Troy G. Langham
FCC Engineering Specialist
Clear Channel Broadcasting Licenses, Inc.
