**ENGINEERING STATEMENT PREPARED BY RYAN WILHOUR OF THE FIRM
KESSLER AND GEHMAN ASSOCIATES, INC., CONSULTING ENGINEERS IN
CONNECTION WITH A LICENSE TO COVER A POST-TRANSITION CHANNEL
FACILITY PRIOR TO THE
JUNE 12, 2009 FINAL TRANSITION MANDATE
WENH-DT
DURHAM, NEW HAMPSHIRE**

DISCUSSION

University of New Hampshire (“UNH”) is the licensee of WENH which is licensed to operate its analog facility on channel 11 (FCC File No.: BMLET-19960516KH), its pre-transition facility on channel 57 (FCC File No.: BLEDT-20001109AAU), and is permitted a post-transition facility on channel 11 (FCC File No.: BPEDT-20080310ACR).

The instant license to cover application is being filed pursuant to the Commission’s February 5, 2009 Public Notice¹ which authorizes the termination of analog service between February 17, 2009 and June 12, 2009 and begin operation of post transition digital facilities. Exhibit E5 demonstrates that the proposed facility (green contour) provides a larger coverage footprint than the existing STA analog facility (orange contour) and the currently licensed channel 57 digital facility (yellow contour) and thus would provide expanded service relative to the actual operating parameters being used for analog and digital broadcast.

The proposed facility meets all the criteria to terminate analog service and operate a post-transition facility as stated in the above reference public notice. As per the public notice requirements, Exhibit E6 demonstrates that the facility is not predicted to cause any interference to pre-transition analog or digital facilities and Exhibit E5 demonstrates that the proposed facility will completely encompass and even extend beyond the current analog and digital facilities thus no service area will be lost relative to facilities that are actually on-the-air.

¹ FCC 09-6 “FCC Announces Procedures Regarding Termination of Analog Television Service On or After February 17, 2009 Termination Notifications for February 17, 2009 Must Be Filed By Monday, February 9”

ATTACHED FIGURES

In carrying out the engineering studies the following attached figures were prepared:

1. Engineering Specifications (Exhibit E1)
2. Elevation drawing of the antenna system (Exhibit E2)
3. USGS 7.5 minute topographic quadrangle showing the proposed transmitter location and the coordinate lines (Exhibit E3)
4. Antenna Elevation Data (Exhibit E4)
5. Map showing the predicted DTV coverage contour relative to the allotted coverage contour. (Exhibit E5)
6. Allocation Analysis (Exhibit E6)
7. Environmental Impact/ RFR Hazard Analysis (Exhibit E7)

ENVIRONMENTAL IMPACT/RFR HAZARD ANALYSIS

An analysis has been made of the human exposure to RFR using the calculation methodology described in OET Bulletin 65, Edition, 97-01. Exhibit E7 is a RFR study demonstrating compliance within 5% of the most restrictive permissible exposure at any location 2 meters above the ground. Exhibit E6 calculations were made using a frequency of 198 MHz, which is the lower edge of the proposed channel. To account for ground reflections, a coefficient of 1.6 was included in the calculations.

Pursuant to OET Bulletin 65 concerning multiple-user transmitter sites only those licensees whose transmitters produce power density levels greater than 5.0% of the exposure limit are considered significant contributors to RFR. Since the proposed operation is well within 5% of the most permissible exposure at any location 2 meters above the ground, it is not considered a significant contributor to RFR exposure. Thus, contributions to exposure from other RF sources in the vicinity of WENH-DT were not taken into account. The instant proposal complies with the FCC limits for human exposure to RF radiation and thus is excluded from further environmental processing.

DECLARATION OF ENGINEER

The foregoing statement and the report regarding the aforementioned engineering work are true and correct to the best of my knowledge. Executed on February 12, 2009.

Ryan Wilhour

A handwritten signature in blue ink that reads 'Ryan Wilhour'. The signature is written in a cursive, flowing style.

METHODOLOGY AND EXPLANATION OF
ENVIRONMENTAL IMPACT / RADIO FREQUENCY RADIATION
HAZARD ANALYSIS

A theoretical analysis has been conducted of the human exposure to radio frequency radiation ("RFR") using the calculation methodology described in *OET Bulletin 65, Edition 97-01*. The RFR analysis is conducted pursuant to the following methodology:

Terrain¹ extraction is compiled from the proposed tower site to radial lengths of 0.25 miles in 0.001 mile increments for 360 radials. The power density is calculated for each terrain point at 6 feet above ground level using the elevation and azimuth pattern of the proposed broadcast antenna. The power density calculations are conducted using the lower edge of the proposed channel frequency. To account for ground reflections, a coefficient of 1.6 was included in the calculation.

The resulting cylindrical polar analysis is then summarized into a coordinate plane graph using the following methodology:

Starting from the origin the maximum calculated RFR value is determined among the 360 degree radials for each 0.001 mile increment, the value is then converted into a percentage of the maximum allowable general population or uncontrolled exposure and plotted as a function of perpendicular distance from the tower.

¹ Terrain extraction is based upon a 3 arc second point spacing terrain database.
