ENGINEERING STATEMENT

This firm has been retained to prepare this engineering statement in support of an application for a construction permit for a new FM station for Grand Portage, Minnesota. This engineering exhibit, of which this Statement is a part, was prepared in accordance with the Rules and Regulations of the Federal Communications Commission and pursuant to the provisions of Section VII of FCC Form 340 on behalf of Cook County Community Radio (hereafter "**CCCR**") in support of an application for authority to construct a new FM broadcast facility operating on channel 202 (88.3 MHz) at Grand Portage, Minnesota. This proposal would provide first aural non-commercial service to the area. The effective radiated power proposed is 1KW, both in the horizontal and vertical plane, and the antenna center of radiation is 70 meters above the average terrain. This power/height combination is an allowable Class A facility permitted under the current rules and regulations.

CCCR proposes to operate from a site uniquely described by the geographic coordinates:

(NAD 27)

47° 58' 40" North Latitude
89° 41' 05" West Longitude

(NAD 83)

47° 58' 39.6" North Latitude
89° 41' 5.3" West Longitude

Engineering Figure 1 is a portion of the Grand Portage, Minnesota-ON 7.5 minute U.S.G.S. topographic quadrangle map showing the proposed transmitter site. Figure 2 is an aerial view of the proposed tower site. A search was performed for the presence of any other FM or AM communications facilities located nearby and none were found. The proposal intends to utilize an existing tower facility. The FCC program TOWAIR shows that no notification to the FAA is required.

Because the area is rural, there is not expected to be any problem with blanketing interference. The applicant is aware of the provisions of §73.318 of the FCC's Rules and the requirement for satisfying all complaints of blanketing interference that are received within a one-year period.

GRAND PORTAGE, MINNESOTA FOR
COOK COUNTY COMMUNITY RADIO
CHANNEL 202 1 KW (H & V) 70 METERS HAAT
PAGE 2**

ALLOCATION CONSIDERATIONS

A review of allotments and assignments on channel 202, on the three immediately upper adjacent, the three immediately lower adjacent channels and channels 255 & 256 (53 and 54 channels removed) shows that the site proposed would have no predicted short-spaced or interference conditions. The results of the allocation study are shown in Figure 3. The transmitter site is located within 320 km of the common border between the United States and Canada. Full protection is afforded to all Canadian concerns and is fully compliant with the Rules and the Agreement with Canada.

COVERAGE CONTOURS

The three-to-sixteen-kilometer average terrain elevations were derived from the Defense Mapping Agency 3-second topography database. However, the site elevation was determined from the U.S.G.S. 7.5 minute Grand Portage topography quadrangle map.

The effective antenna radiation center height for each of the eight standard 45-degree spaced radials was used in conjunction with the F(50,50) metric curves of Figure 1 of §73.333 of the Rules to determine the distances to the 70 dBu and 60 dBu coverage contours.

DISTANCE TO CONTOURS

DISTANCES TO CONTOURS (Kilometers):

Antenna COR elevation (AMSL): 357 meters Average HAAT: 70 meters
 Frequency: 88.3000 MHz
 Coordinates: N 47 58 40.00 W 89 41 5
 F(50,50) Curves Number of Contours: 2

AZ (degs)	HAAT (m)	ERPd (kW)	CONTOUR LEVELS (dBu) :	
			70.0	60.0
0.0	-4	1.0000	5.7	10.1
45.0	35	1.0000	6.1	10.8
90.0	173	1.0000	13.7	24.4
135.0	174	1.0000	13.7	24.5
180.0	174	1.0000	13.7	24.5
225.0	99	1.0000	10.3	18.3
270.0	-99	1.0000	5.7	10.1
315.0	11	1.0000	5.7	10.1

The contours drawn from the data are depicted on the maps included as Engineering Figure 4 and it is readily evident that all of Grand Portage, Minnesota is included within the proposed 60 dBu coverage contour as required by §73.515 of the Rules.

Figure 5 shows the radial between the proposed transmitter location and the city of license and that there is no intervening terrain to block the signal to the proposed city of license.

INTERFERENCE STUDIES

The instant proposal meets all requirements for contour protection requirements towards other facilities. Tabulations of the proposed protections to each of the relevant stations is found in Figures 6. It is believed that the instant proposal provides sufficient clearance to all stations as required by §73.507 and §73.509 of the Rules.

The proposed transmitter site is within the specified affected radius of two (2) Channel 6 television stations, WLUC(TV), Marquette, MI and KBJR(TV), Superior, WI. Figures 6.2 and 6.3 clearly demonstrate the instant proposal is in full compliance with §73.525 of the Rules.

ANSI POWER DENSITY CALCULATIONS

The power density at the base of the tower was calculated using the following formula from OST Bulletin Number 65, August, 1997:

$$S = \frac{(0.64)(1.64)(ERP)(1000)(\text{milliwatts/watt})}{(\pi(R)^2)}$$

where: S = power density in milliwatts per square centimeter

ERP = effective radiated power in watts

R = distance to radiation source in centimeters

pi = 3.14

Using this formula and the values shown below, a power density of 0.057 mW/cm² is found to exist at the base of the tower.

ERP = 2,000 watts

R = 3,400 cm.

The ANSI limit for public exposure is 0.2 mW/cm² in this frequency range. The predicted radiation level is 28.9% of the limit which is well below the ANSI limit for exposure.

Access to RF circuitry is restricted. Signs are posted warning of the potential danger. When persons require access to the site, tower or antenna for maintenance purposes, the transmitter power will be reduced or completely eliminated to comply with ANSI guidelines. Hence, the conditions of Section 1.1306(b)(3) would not be involved.

COOK COUNTY COMMUNITY RADIO
CHANNEL 202 1 KW (H &V) 70 METERS HAAT
PAGE 4**

ENVIRONMENTAL IMPACT STATEMENT

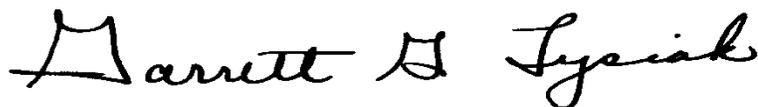

The instant proposal is categorically excluded from environmental processing since none of the conditions of Section 1.1306(b)(2) and (3) would be involved for the following reasons:

- 1) The site proposed is not in or near any location referenced in Section 1.1306(b)(1) as being of environmental interest.
- 2) The provisions of Section 1.1306(b)(2) relating to the use of high intensity strobe lighting do not apply since this tower is not required to have this type of lighting system.
- 3) Compliance to Section 1.1306(b)(3) regarding human exposure to RF radiation was examined and a search was made about the proposed site coordinates to locate any additional sources of RF radiation and none were found.

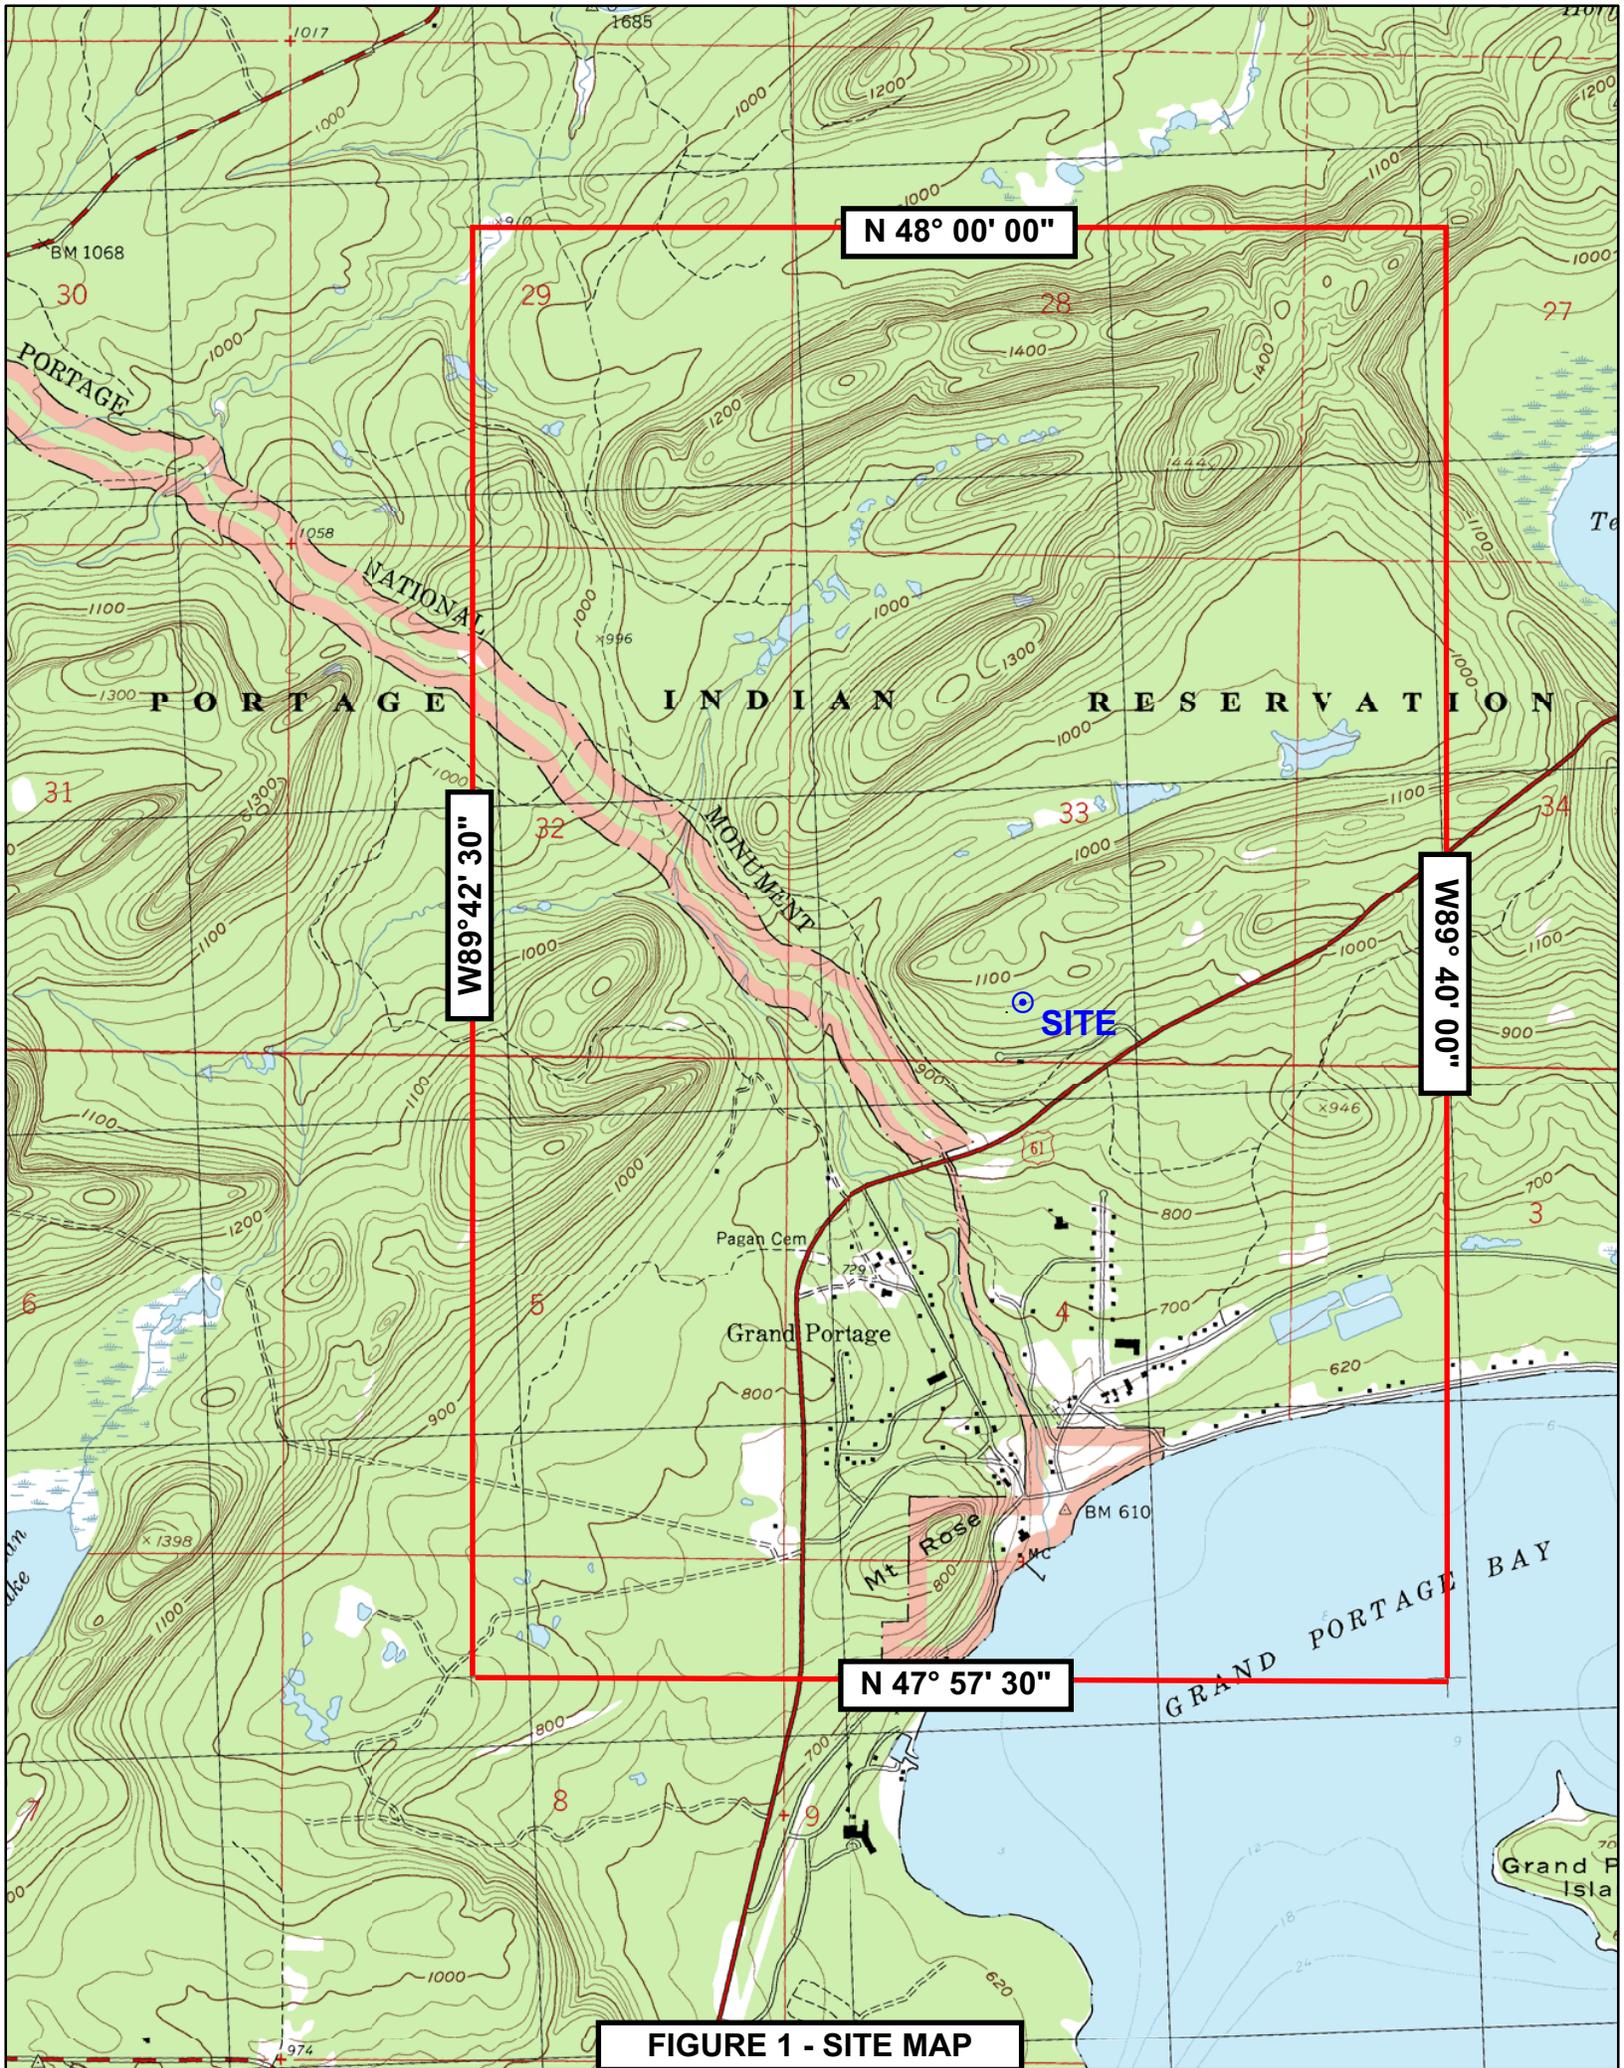

CONCLUSIONS

Based on the engineering studies provided, the following conclusions can be obtained:

- 1) Implementation of the instant proposal will provide Grand Portage, Minnesota with a new full time aural broadcast service.
- 2) All of Grand Portage would be served with a signal of 60 dBu or greater from the proposed construction site.
- 3) The proposal is in complete conformance with all technical rules of the Federal Communications Commission.
