

## **Exhibit 2**

In Certain Minor Changes Without a Construction Permit, 12 FCC Rcd 12371 (1997), the Commission modified Section 73.1690(c) to permit certain broadcast stations that met all relevant spacing requirements to increase effective radiated power (ERP) with prior FCC authorizations, provided that within 10 days of commencing operation with increased ERP, the licensee filed a license application (FCC Form 302) to cover the changes. By Public Notice, DA 97-2568, released December 8, 1997, the Commission specified the facilities that were allowable under this change in its rules. That Public Notice authorized an increase in ERP for WVPS from 36 kW to 49 kW, provided other relevant requirements were met.

The purpose of the instant application is to license the authorized increase in ERP for WVPS. There has been no change in transmission site or location of the antenna on the tower. WVPS began operating with the facilities described in this application on Saturday, November 3, 2001.
