Describe the educational and informational objective of the program and how it meets the definition of Core Programming.	Animal Atlas continues its tradition as a series that blends animal images with information on a wide range of life science issues in a manner that is entertaining and clever. The episodes combine facts, comparisons, and reflections on broad concepts with an engaging narration that targets the 13 to 16 year old age range in both vocabulary and interest level. The series is rich with interesting details that support examination and curiosity. The program maintains educational integrity while remaining entertaining to its target age group with such devices as intercutting facial close ups of a gorilla and a chimp as reaction shots, a narration that often addresses animals instead of the human audience, and a wonderfully whimsical musical score. Visuals, not facts, lead the content. The use of clear and colorful graphics is excellent as support for concept clarity. Size comparisons are done in silhouette, typical in state adopted textbooks and the global map with highlighted ranges elephant species is necessary for geographic context at the 13 to 16 year old age range. Additionally, there is a wide range of visuals that support viewer interest from underwater photography to close ups of animal morphology and an editing style that includes fast cuts and split screens to better make comparative points. The compare and contrast method of looking at mammals, lizards, invertebrates, and extinct species, while educationally sound, is kept entertaining with humor and an irreverent tone "perfect, again, for the target age. This blend of authentic educational value with target-age entertainment is typical of the Animal Atlas series. The entertainment value of the series may make the educational value nearly invisible to the viewer, but it is there.
