To determine overlap at ground level, complete Site Details section.

Overlap Area Map

TEST 2: In the above map, if the black circle does overlap one or more of the other colored circles shown above, then an additional test must be done to determine the size of the overlap area and the potential listeners in that area. In the map below, the blue circle represents an area that is 650 meters around your proposed LPFM station. **Look very carefully at the satellite image within that blue circle.** If there are any homes, business locations or 4-lane highways (freeways, expressways, interstates, etc.) within that blue circle, those are 'potential listeners' and as a result, the channel would NOT be available for second adjacent channel waivers.
